- Group 4** Claims 27-37 A method indicating whether a test sample is affected by a **precursor lesion** of which the control sample is unaffected by detecting levels of DNase-X **nucleic acid**.
- Group 5** Claim 39 A method of identifying and obtaining drug candidates.
- Group 6** Claims 38 and 43 drawn to a probe binding to DNase-X **polypeptide** and a kit for **detecting** cancer.

- Group 8** Claims 40-42 drawn to a kit/pharmaceutical composition useful for the **treatment** of cancer and their precursor lesions.

In response to the second restriction requirement, it was recognized that Applicant elects the following group:
